

## Progression in Maths at Thurnham CE Infant School through an Empowering Curriculum

### Recovery elements

*"At Thurnham our Empowering Curriculum will give pupils the key skills that they need to flourish; Brain Power, Resilience, Independence, Investigating and Creativity"*

At Thurnham we adopt a Mastery approach to the teaching and learning of Mathematics and all pupils are exposed to fluency, reasoning and problem solving activities as part of their Mathematical teaching and when mathematical skills and concepts are applied in a cross-curricular way.

EYFS	YEAR 1	YEAR 2
<p>The children started school in September 2020 having had very little transition into school. It was not possible to meet the children before they started. From the end of March to June, the children had a period where they were absent from preschool, nursery and child minders. During Term 6 the children had the opportunity to return to their setting. It is not known how many children returned to their settings. No data or transition paperwork was required this year (a few preschools still provided this information, based on predicted data.)</p> <p>The Baseline Assessment was optional again this year, and EYFS have decided, after doing it last year, to not use it. They have completed our own assessments of the children. Initial observations in the first few weeks of school allow them to understand children's starting points. Once this data has been entered into SIMS (by the end of term 1) and it has been analysed they will have a better picture of the year group, and will be able to identify and plan for significant gaps. Not being able to cross bubbles and spend time in other classes has meant that the EYFS lead has been unable to get to know the children as she usually would. She has instead, liaised with the class teachers about any concerns they have in Maths. One class teacher has no concerns about Maths. The class teacher was concerned about children not knowing their numbers past 10 (however, it is not usual to expect the children to know this at this point of the year) and that a few children know no numbers at all.</p> <p>To close any gaps, EYFS will be using the White Rose Maths document for planning Adult Directed</p>	<p>Although a significant number of EYFS pupils returned to school in Term 6 (June 2020), they had been absent from school for 3 months. The EYFS team, using the White Rose home learning resources as a basis for their activities, set maths activities. However, the engagement in these tasks, and the work that that was subsequently produced and submitted to the Seesaw learning platform, varied considerably in both quantity and quality. It is relevant to note that some pupils (approximately 20% across the year group as a whole) submitted very little, or no, home learning during their absence from school. Even more concerning are the number of children (about 15% across the year group as a whole), who did not return to school at all until the compulsory return in September 2020. Some of these pupils had been absent for almost 6 months and had engaged in little or no home learning via Seesaw for the entire period.</p> <p>The result for Year 1 has meant that there is a far greater disparity between pupils' mathematical understanding as they enter KS1. For example, there are pupils that can already achieve some of the Year 1 objectives such as being to count, forward and backward from any number up to 100, whilst others are still unfamiliar with numbers up to 10. As a consequence, Year 1 have adopted the new White Rose Maths planning for Year 1 which incorporates revision of concepts taught in EYFS, whilst still covering and extending pupils into the Year 1 curriculum objectives. Additionally Year 1 have catch up sessions after each lesson to address any pupils that may have presented with misconceptions or gaps in their knowledge when covering a mathematical concept. Year 1 are also using the Third Space fluent in 5 resources as a</p>	<p>Current Year 2 pupils were given the opportunity to return to school in Term 6 (June 2020) and a significant number did. Additionally most pupils engaged with the mathematical home learning tasks that were set each week during the school closure and submitted work via Seesaw. However, approximately 10% of the year group submitted little or no maths work.</p> <p>Year 2 are also using the WRMH resources, which revisit key concepts of number and place value from Year 1, as well as following the Year 2 objectives. They use our mental starters to go over fluency from year 1. They do Monday Mini Maths each week, which is always revision of what we have learned so far this year. Sometimes it is mental or whiteboard work using the WRMH slides, sometimes it is a sheet of written questions to get them used to having different types of questions one after the other (to prepare for Sats). Year 2 have completed the WRMH end of unit assessment so that they can identify the children who have not grasped the work so far. They also have intervention groups which will focus on key elements of the Year 2 WTS expectations, revisiting Year 1 expectations as needed.</p> <p>Some children are also doing Plus One.</p> <p>At the start of term a quick 'assessment' of all children was carried out - reading random numbers to 100, then writing these. Most children were secure, but those who were not have been identified and have been given small group support.</p> <p>Year 2 have put the children in to approximate ability groups</p>

<p>opportunities. This will be important for ensuring coverage of the curriculum. They plan Maths on a weekly basis.</p> <p>Ongoing assessments will be done e.g. observations to plan in Next Steps, which will feed into planning. The children's starting points are usually 40-60 months, however, they will ensure 30-50 months expectations are embedded before being sure they can move on. This may differ significantly among the children. They will need to ensure the gaps within Maths are closed to allow children to meet the Early Learning Goals at the end of the year.</p> <p>Observations of the children during Child Initiated time will be crucial for planning in the experiences, opportunities, environment and resources needed to move on the learning.</p> <p>As EYFS progress within the Maths curriculum, it will be important to monitor for possible gaps occurring, which we would need to address, for example, by revisiting concepts.</p>	<p>consolidation exercise and this also acts as a formative assessment tool to identify if pupils have any gaps in their mathematical knowledge. This feeds into future planning so that these can be addressed and covered. At present, there are a few pupils that have commenced specific daily interventions such as Plus One, however, it is not evident currently whether this number is greater than in previous years. Ongoing formative and summative assessments (White Rose End of Block Assessments) will be used to inform future planning.</p>	<p>so that they can focus on supporting those who need it, and extending those who are secure. They find this works better than mixed ability groups in year 2.</p>

count on or back to find the answer.

- statements involving addition (+), subtraction (-) and equals (=) signs
- represent and use number bonds and related subtraction facts within 20
  - add and subtract one-digit and two-digit numbers to 20, including zero

solve one-step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems such as  $7 = ? - 9$

### **Number-Multiplication and division**

- Solve problems, including doubling, halving and sharing.

### **Number-Multiplication and division**

- solve one-step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher

- using concrete objects and pictorial representations, including those involving numbers, quantities and measures
- applying their increasing knowledge of mental and written methods
- recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100
- add and subtract numbers using concrete objects, pictorial representations, and mentally, including:
  - a two-digit number and ones
  - a two-digit number and tens
  - two two-digit numbers
  - adding three one-digit numbers
- show that addition of two numbers can be done in any order (commutative) and subtraction of one number from another cannot
- recognise and use the inverse relationship between addition and subtraction and use this to check calculations and missing number problems

### **Number-Multiplication and division**

- recall and use multiplication and division facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers
- calculate mathematical statements for multiplication and division within the multiplication tables and write them using

### Number-Fractions

- Solve problems including halving.

### Measurement

- children use everyday language to talk about size, weight, capacity, position, distance, time and money to compare quantities and objects and to solve problems.

### Number-Fractions

- recognise, find and name a half as one of two equal parts of an object, shape or quantity
- recognise, find and name a quarter as one of four equal parts of an object, shape or quantity

### Measurement

- compare, describe and solve practical problems for:
  - lengths and heights
  - mass or
  - capacity/volume
  - time)
- measure and begin to record the following:
  - lengths and heights
  - mass/weight

the multiplication ( $\times$ ), division ( $\div$ ) and equals (=) signs

- show that multiplication of two numbers can be done in any order (commutative) and division of one number by another cannot
- solve problems involving multiplication and division, using materials, arrays, repeated addition, mental methods, and multiplication and division facts, including problems in contexts

### Number-Fractions

- recognise, find, name and write fractions  $\frac{1}{3}$ ,  $\frac{1}{4}$ ,  $\frac{2}{4}$  and  $\frac{3}{4}$  of a length, shape, set of objects or quantity
- write simple fractions e.g.  $\frac{1}{2}$  of 6 = 3 and recognise the equivalence of  $\frac{2}{4}$  and  $\frac{1}{2}$

### Measurement

- choose and use appropriate standard units to estimate and measure length/height in any direction (m/cm); mass (kg/g); temperature ( $^{\circ}\text{C}$ ); capacity (litres/ml) to the nearest appropriate unit, using rulers, scales, thermometers and measuring vessels
- compare and order lengths, mass, volume/capacity and record the results using  $>$ ,  $<$  and  $=$
- recognise and use symbols for pounds (£) and pence (p); combine amounts to make a particular value
- find different combinations of coins that equal the same amounts of money
- solve simple problems in a practical context

<p><b><u>Geometry-properties of shapes</u></b></p> <ul style="list-style-type: none"> <li>They recognise, create and describe patterns. --	---	---

tally charts, block diagrams and simple tables

- ask and answer simple questions by counting the number of objects in each category and sorting the categories by quantity
- ask and answer questions about totalling and comparing categorical data
- interpret and construct simple pictograms, tally charts, block diagrams and simple tables
- ask and answer simple questions by counting the number of objects in each category and sorting the categories by quantity
- ask and answer questions about totalling and comparing categorical data
